SUSPICIOUS TRANSACTION REPORT (STR)

CONFIDENTIAL · REGULATORY SUBMISSION DRAFT

Subject Customer ID:	CUS-1006	Report Generated:	2026-09-01 17:38:27 UTC
Subject Name:	Vikram Singh	Adjudication:	■ DRAFT REGULATOR-READY STR (High Risk / Suspicious Pattern Confirmed)
Regulatory Framework:	FIU-IND / FATF PMLA Guidelines	Filing Priority:	High Priority Escalate

SUSPICIOUS TRANSACTION REPORT (STR)

1. REPORT METADATA

- Subject ID: CUS-1006 | Subject Name: Vikram Singh
- Filing Classification: High Priority Suspicious Activity Filing
- Core Typology: Layering & Pass-Throughs (Trade-Based Money Laundering Indicator)

2. EXECUTIVE SUMMARY

This Suspicious Transaction Report (STR) is formally filed regarding Vikram Singh (Subject ID: CUS-1006), an account holder operating under a declared import/export trader profile with a monthly income baseline of \$9,000. Over a 72-hour observation window, the account exhibited a 100% anomaly ratio, completely lacking routine baseline or domestic operational activity. The core alert triggers include a rapid-drain layering pattern involving high-velocity cross-border SWIFT transfers that dwarf declared income, routing funds between high-risk offshore trade hubs (Dubai, Hong Kong, and Singapore) without local economic nexus.

3. SUBJECT & KYC CONTEXT

- Customer Name: Vikram Singh
- Subject ID: CUS-1006
- Account Age: 42 Months
- Declared Occupation: Import/Export Trader
- Declared Monthly Income: \$9,000.00
- Risk Score: 82 / 100 (High Confidence)
- Analysis of Discrepancy: While the customer's trade-based profile provides a theoretical basis for international wire activity, the scale, velocity, and complete absence of domestic retail or operational ledger entries (0% routine baseline transactions) confirm that the account is not operating as a standard commercial business checking account. Instead, it is functioning exclusively as an isolated, unverified pass-through conduit for international money movement, severely breaching the declared monthly income threshold.

4. CHRONOLOGY OF SUSPICIOUS TRANSACTIONS

- **2026-03-01 13:00 | +\$22,000.00 SWIFT Inflow:** Flagged for disproportionate inflow exceeding stated monthly income (\$9,000), originating from Dubai Trading LLC (high-risk offshore jurisdiction).
- **2026-03-02 09:15 | -\$18,000.00 SWIFT Outflow:** Flagged for rapid outbound movement representing an 81.8% drain of the previous day's balance, directed to a Singapore Supplier within a compressed 20-hour velocity window.
- **2026-03-03 16:30 | +\$15,000.00 SWIFT Inflow:** Flagged for subsequent offshore exposure, receiving funds from a Hong Kong Buyer to replenish the drained balance and maintain an active pass-through cycle.

5. TYPOLOGY & REGULATORY GUIDELINES ANALYSIS

- **Primary Matched Typology:** Layering & Pass-Throughs (Vector Database Definition: "Moving funds rapidly across multiple international or inter-bank accounts to obfuscate paper trails.")
- **Regulatory Basis:** FATF Recommendation 10 (Customer Due Diligence), Recommendation 16 (Wire Transfers), and FIU-IND Guidelines on Prevention of Money Laundering.
- **Behavioral Indicators Matched:**
 - Complete absence of routine domestic/retail transactions (0% routine vs. 100% anomalous baseline).
 - Immediate outward funneling of 81.8% of inbound liquidity within a tight 20-48 hour velocity window.
 - Utilization of the account as a transient pass-through entity to break the audit trail between offshore counterparties.
- **Compound Risks:** Extreme velocity compression, exposure to high-risk offshore financial/trade hubs (UAE, Singapore, Hong Kong) lacking a domestic operational nexus, and severe trade/income inconsistency.

6. FALSE-POSITIVE VS TRUE-POSITIVE EVALUATION

- **Precedent Rejection:** The customer was previously cleared 3 months ago for a low-volume domestic invoice alert. This historical precedent **does not apply**. The behavioral pattern has fundamentally escalated from localized domestic invoicing to high-velocity, cross-border SWIFT transfers involving high-risk offshore jurisdictions.
- **Pass-Through/Layering Mechanics:** The rapid drain of 81.8% of inbound funds (\$18,000 out of \$22,000) within a 20-hour window demonstrates classic layering rather than legitimate trade settlement, which typically entails staggered milestones, invoicing verifications, and operational overhead.
- **Jurisdictional & Baseline Risk:** Transactions exclusively route funds between high-risk offshore trade centers without any domestic utility, tax footprint, or everyday retail/operational ledger activity. This 100% anomaly ratio strips away the contextual legitimacy expected of a genuine individual trader's operating account.

7. COMPLIANCE OFFICER CONCLUSION & RECOMMENDED ACTIONS

- **Final Adjudication:** True Positive (High Risk / Suspicious Activity Confirmed). The subject account presents a clear and present danger of being utilized for illicit layering and trade-based money laundering (TBML) schemes.
- **Recommended Actions:**

- Immediate Account Restrictions:** Place a temporary freeze/suspension on all outward international wire transfers and automated clearing functions pending enhanced due diligence (EDD) and documentary proof of underlying trade contracts.
- Enhanced Monitoring:** Apply permanent high-risk monitoring flags to the profile of Vikram Singh (CUS-1006) and any associated beneficial entities.
- Law Enforcement Escalation:** Formally transmit this Suspicious Transaction Report (STR) to FIU-IND / relevant financial intelligence authorities and prepare a complete dossier for law enforcement escalation regarding potential cross-border layering and illicit fund movement.
